EXPERIENCE

Divami Design Labs

June 2026 – Present

Software Developer Intern

Hyderabad, India

- Cut perceived latency in the patient intake flow by **splitting a slow single API call into separate requests**, letting the UI render partial results instead of blocking on one long response
- Built the app's error-handling layer: a reusable toast notification system covering API failures, validation errors, and **audio-specific failures** such as denied microphone access and unusable recordings
- Implemented responsive layouts for phone, tablet and desktop, plus media upload and an edit flow letting staff correct AI-transcribed patient responses before the case summary is generated

PROJECTS

AI Interview Coach | *FastAPI, PostgreSQL, React, Gemini* | [GitHub](#) | [Demo](#)

July 2026 – Present

- Built a REST backend that parses an uploaded resume into structured JSON and generates interview questions grounded in the candidate's own projects rather than generic templates
- Designed PostgreSQL schema and rubric-based scoring across three dimensions, storing the model's supporting evidence beside each score so grades stay auditable
- Implemented JWT auth with bcrypt hashing and per-row ownership checks on every query, preventing cross-user data access

Job Processing System | *FastAPI, PostgreSQL, SQLAlchemy, React* | [GitHub](#)

August 2026 – Present

- Built a REST backend with FastAPI, SQLAlchemy, and PostgreSQL for creating, retrieving, and tracking file-processing jobs
- Designed a PostgreSQL-backed Job model with job status, filename, timestamps, completion time, and processing result fields
- Implemented modular API routing with FastAPI APIRouter, database session dependencies, Pydantic response schemas, and HTTP 404 error handling

MoodSphere | *React, JavaScript, CSS* | [GitHub](#) | [Demo](#)

2025

- Built and deployed a React 18 SPA that maps a selected mood to a three-colour palette, activity prompts, and a quote based on colour-psychology principles; ships six presets and lets users define custom moods at runtime
- Persisted user name, custom moods, and a date-stamped mood history across LocalStorage, hydrating on mount with guarded JSON parsing so corrupted storage degrades gracefully instead of blanking the app
- Drove a four-screen flow (splash → name → mood picker → dashboard) from a single state value, with responsive breakpoints and CSS transitions on palette changes

SKILLS

Languages : C, Java, Python, JavaScript, SQL

Frontend : HTML, CSS, React.js

Backend & Databases : Node.js, FastAPI, MySQL, PostgreSQL

Tools : Git, GitHub, VS Code

EDUCATION

National Institute of Technology, Srinagar

Aug. 2024 – May 2028

Bachelor of Technology in Information Technology

Jammu&Kashmir

* **CGPA**: 8.07 / 10
